

Invesco Diversified Dividend Funds Class A (LCEAX) - Trend Capture Overlay

April 22, 2018

Executive Summary

Overview

Superior performance on a consistent basis comes from the ability to be in synchrony with major price trends. The ability to capture a large part of bull trends and to avoid most of the bear trends in individual stocks and sectors can dramatically impact returns across market cycles and deliver superior long term performance. The Trendrating solution is designed to improve this ability by providing intelligent analytics that can complement and enhance the investment decision process and produce tangible results.

We can demonstrate Trendrating's ability to materially influence portfolio performance through a historical overlay of its trend capture model on the actual holdings of a portfolio. Through this analysis we demonstrate that induction can seamlessly integrate into the existing workflow of an investment strategy and have a material impact on the performance of the investment strategy.

Trendrating's trend capture model has the unique ability to identify and score the prevailing price trend of a security with high accuracy. The ability to distinguish between securities based on their respective price trend should be of paramount importance to every portfolio no matter the type of its investment strategy. Every investment manager should infuse the decision making process with information that facilitates the selection of securities whose prices are trending, rather than ones whose price trends are disconnected from their fundamentals.

Trendrating Model

The Trendrating model assigns each security a directional rating; uptrends (**A** or **B**) and downtrends (**C** or **D**). A continuous absolute rating scale, **Smart Momentum (SM)**, is constructed to facilitate relative ranking of a universe of securities. The discrete rating distinguishes between securities in uptrends and downtrends, whilst the continuous rating allows ranking within the same rating bucket. In tandem, the two rating frameworks facilitate a flexible and robust framework for security selection and portfolio construction.

Analysis Framework

- Select holdings history for which constituent history is complete and for which there are very few missing periods in the history selected for the analysis
- The universe of stocks in the benchmark associated with the investment fund is used as a buy universe from which to find alternative securities. In absence of a named benchmark, an appropriate buy universe is assigned for the analysis
- In each rebalancing period in the holdings history of the portfolio:
 - Identify all **C** & **D** rated securities
 - Amongst the **C** & **D** rated securities, identify stocks with extreme negative SM scores¹ whilst in a negative price trend, are quite susceptible to sharp upward price swings during and post market shocks. Good risk management practice advocates a robust mechanism for identifying outliers and then implementing a framework of insulating the investment portfolio from their erratic behaviour. In this analysis, we do not alter positions with extreme SM scores
 - Reallocate weight of **C** & **D** rated securities into an **A** or **B** rated security with the highest SM score in the same region/country, industry/sector, and currency²
- Returns for the Fund, Trend Capture Portfolio³, and Benchmark are price returns calculated from the individual constituent level for each of the three portfolios

¹Our empirical research shows that an SM scores of -2.90 is a valid extreme threshold value

²User determined parameters that are relaxed in hierarchal order if no optimal match is found

³The portfolio generated as a result of the trend capture overlay on the holdings of the investment fund

Report Description

- Trend Overlay Summary Data
 - Key info: Provides information on analysis history, fund benchmark, and the analysis rebalancing frequency
 - The two bar charts respectively compare the annual return and annual volatility of the original fund and of the trend capture portfolio
 - The line chart captures the cumulative return of the fund, of the trend capture portfolio, and of the benchmark if applicable
 - Summary Metrics: This table provides key performance and risk metrics of the original fund and of the trend capture portfolio
- Risk-Return Profile
 - Comparative Analysis
 - Annualised Excess Return analysis: The comparisons of the excess return of the trend capture portfolio vs the fund, and if applicable, of the fund vs the benchmark and of the trend capture portfolio vs the benchmark
 - Annualised Tracking Error analysis: The tracking error between the trend capture fund and the original fund captures the magnitude of the differences between the overlay portfolio and the original portfolio. It should be different enough without departing from the original investment strategy. The comparisons of the tracking errors versus the benchmark, if applicable, validates the fact that the overlay strategy does not change the investment mandate
 - Annual Tables
 - The first set of columns tabulate the year by year returns of the trend capture portfolio and its excess return over the original fund and its benchmark
 - The next set of columns present the volatility comparison where the key message is that the volatility of the trend capture portfolio should not differ materially from that of the original fund
 - The third set of results illustrates the reduction in drawdowns that can be achieved through the trend capture overlay. Reduction in downside risk during market declines is perhaps the most important benefit a model can provide
 - TCR Analysis
 - TCR (Trend Capture Rating) is a forward-looking risk metric of an aggregate⁴ calculated from the constituent level weights and ratings from the Trendrating model
 - The trend capture overlay should raise the TCR of the original portfolio
 - Portfolios that maintain a higher TCR tend to outperform and periods with higher TCR tend to deliver superior returns
 - Trendrating's recommendation to clients is to endeavour to maintain a high TCR to improve consistency of portfolio returns
- Historical Portfolio Details
 - The top section provides information on the number of number and weight of the **C** & **D** rated constituents that have been switched on a chosen rebalance period⁵
 - Transaction Table: Tabulates all the matched trades performed in the latest rebalancing period and contains the Ticker, Name, Weight, Rating, and Smart Momentum score of each security traded in the given holding period
- Allocation
 - Regional allocation for the latest rebalance period
 - Sector allocation for the latest rebalance period
- Appendix
 - Contains the full history of trades performed in the analysis presented by rebalance period and identifies all trades securities and matched trades

⁴Portfolio, Index, Sector etc.

⁵The default is the latest rebalance period
